An Overview Of Ethereum

Road Map

An Overview Of Ethereum

After Bitcoin, Ethereum is the second most popular cryptocurrency globally. It is a decentralized blockchain network for recording and verifying transactions. It is executed through smart contracts and is cultivated alongside local virtual currency (ETH). Ethereum code is used to standardize digital values based on programming activities and conditions.

Ethereum holds value in ETH for three main purposes. It provides network operation and transaction settlement by allowing users to send or receive funds in the form of ETH.

Before taking office, the Ethereum platform aimed to surpass Bitcoin as the main function of the p2p platform. This is a platform that facilitates the implementation of complex structures or smart contracts.

Its community is known as the world's largest digital currency operator. The progress of the platform is based on the collaborative efforts of its global developer community. Currently, Ethereum is in the next stage of development called Ethereum 2.0. In addition, the work will be carried out in multiple stages, or the development is expected to be completed after 2022.

In short, Ethereum is a digital technology that allows users to send cryptocurrency to anyone for a small fee. It lets users make digital payments without any banks. Ethereum engineer for multiple programming and, it is also used for lots of digital assets.

History

Brief History Of Ethereum

In this white paper, we will introduce in-depth the main components related to the history of the Ethereum event that led to the launch of the network, the 2016 DAO hacking event, or the five different stages of the evolution of the value of Ethereum.

Before network starting in 2013 or 30 July 2015

First, Ethereum is regarded as a proof of concept. Vitalik Buterin has developed a vision that virtual currency and its built-in blockchain can provide more services than standard p2p wire transfers. It is his intention to create an excellent virtual ecosystem. This is used to present a platform based on blockchain or smart contract programming. Both will receive dignity through a native virtual currency called ETH.

After building programming abilities into Ethereum protocol, developers will be able to design new sets of decentralized applications. These applications are hosted on a public blockchain with an automated payment system.

Application-based on Ethereum can automate the transfer of data. Under dynamic conditions, it allows customized business models for a new economy set-up.

The controversial DAO hack

Internet of things company launches The DAO on ethereum. The term DAO is positioned as a decentralized company. It provides voting rights for all members and is proportional to the investment in financing projects or the final vote. If any project is valuable, members will be rewarded according to the terms of participation and smart contracts in the DAO Charter of Rights.

But this has not been as successful as the previous plan. An unknown hacker set an error on this smart contract. As a result, investors are eager to liquidate their holdings and liquidation. This led to controversy about how to resolve the situation and restore the stolen funds. Just in case, the original Ethereum protocol was recreated as the Ethereum classic protocol.

Now, the Ethereum or Ethereum classic networks are beginning to safely operate. It is similar to real-world applications in terms of capabilities and functions, and changes in the basic layer have produced major differences in development and technical work.

Five Phases of Ethereum

Phase 1- Frontier

Starting of a network and allowing users to trade ETH.

Phase 2- Homestead

Many parameter costs and gas prices Update.

Phase 3- Increase security- 16, October 2017

Enhanced security and privacy by adding advanced security features.

Phase 3.5- Constantinople

Improvisations in explored scalability and smart contracts by using all the channels

Phase 4- Serenity or growth after 2022

Channels are merged in many stages for the Expansion network, and the programming improvements of intelligent contracts are merged.

About Ethiron

Ethiron's native token provides an advanced ecosystem. It will be based on the Ethereum blockchain. As a holder of Ethiron tokens, you will benefit from the rewards for future transactions. The complete supply of tokens is 50 million.

Ethiron's motivation is to create different protocols for decentralized applications or to provide different sets of operations suitable for a class of decentralized applications. Ethiron does this by providing a basic overview of the base layer or embedding a programming language that allows everyone to perform smart contracts and state transition operations.

It is also known as the currency version of the name written in two lines of code. If the conditions are met or not met, some encrypted things contain or unlock value. It builds on the platform because it increases the power of value consciousness, Turing integrity, or status.

The many advantages of Ethiron token holders include but are not specific to.

About Ethiron

- **Ethiron trading**

  Users in all countries would be able to trade. We provide 24/7 support for trading and smooth transactions.

- **Token airdrop**

  This applies to situations where other companies have agreed to provide Ethiron tokens in exchange for their listing. We will inform you about the airdrop based on the actual price you have.

- **Listing amount**

  The total supply of Ethiron token is 5 Crore. You can also use these tokens to pay the same amount.

- **Opinions**

  As an evolving platform, we provide token holders the right to vote and express opinions on the list.

- **Ethiron burning value**

  Every time, according to the transaction volume of our crypto platform, all the rewards token will burn when ethiron get listed on ICO.

History And Launch (Switzerland) Of ETHIRON

Since it's inaugural in 2019, Ethiron has been a reputed name in the crypto industry now. We deal in a hard time to grow our company and reach very close to our goals. We are very ambitious in our dreams of releasing a crypto token named Ethiron. Now, we are just a step away from launching Ethiron.

After the launch of Ethiron, we expected to be the best crypto-token in the cryptocurrency market. We launch a ravishing coin that will deliver outstanding results.

What Will Be The Ethiron Project?

The ETHIRON protocol was developed as an advanced version of the cryptocurrency. It comes with many advanced features, including financial contracts, blockchain custody, withdrawal restrictions, etc. The ETHIRON ecosystem will directly support some applications. However, a complete programming language is created for any type of transaction or application.

In short, ETHIRON is an excellent trading token to invest in the digital world. The ETHIRON project is implemented by the Ethereum protocol. It provides the unique potential for operation with a one-handed control panel. It is not a closed token or it has multiple applications in finance or data storage. We recognize that it is a reliable token for investors in the coming years.
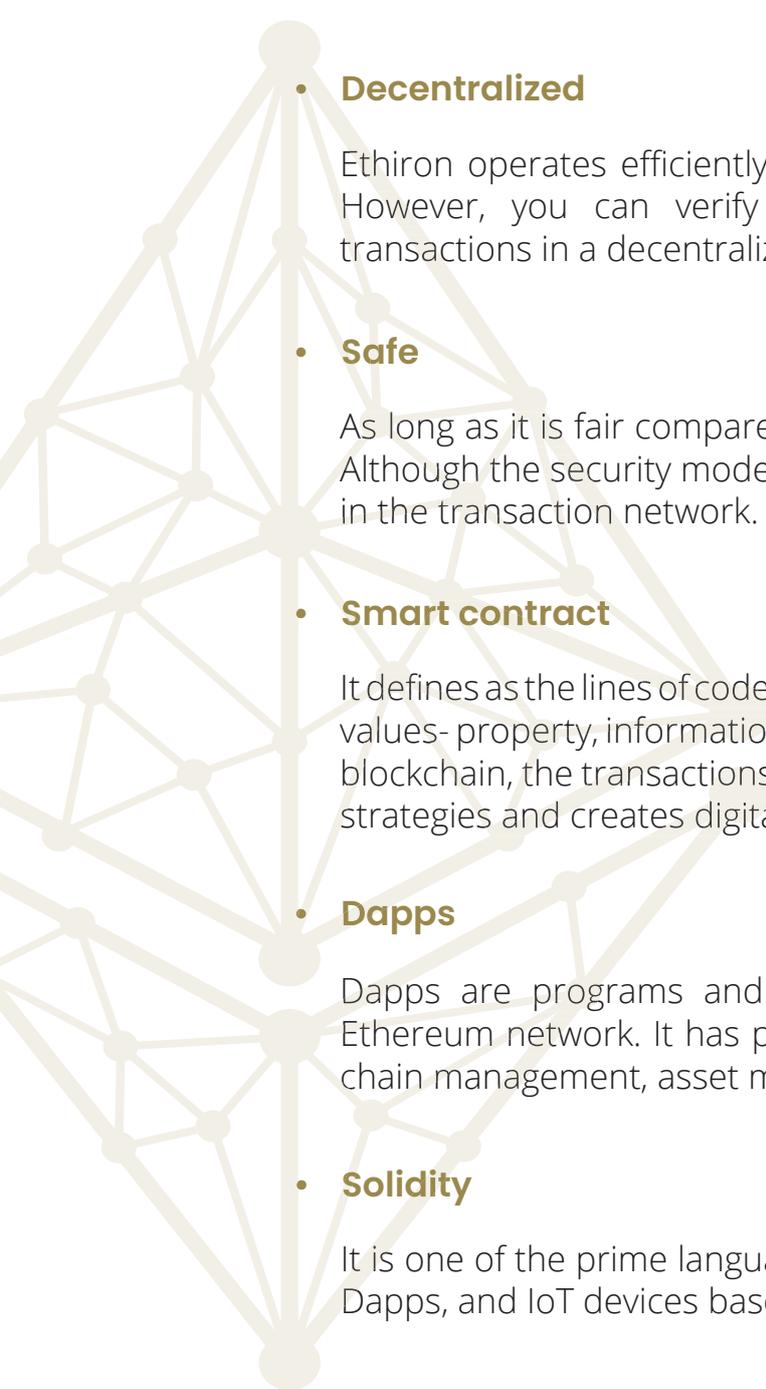

What Is Erc-20 And What Does It Mean For Ethiron?

Ethiron is a popular blockchain and cryptocurrency system based on the use of tokens. It can be traded, sold, or bought. In the Ethereum setup, the tokens apply to different ranges of digital assets. However, ERC20 is one of the most popular Ethereum tokens. Ethiron is also an Ethereum-based token. These tokens are digital assets based on the blockchain and can be sent or received anytime, anywhere.

ERC20 provides different functions for the token benefits under Ethereum. These are basically defined as prime functions in which all tokens or how users access data are passed. This specific token will function under the Ethereum ecosystem. It offers compatibility between many tokens based on Ethereum.

Features Of Ethiron

- **Decentralized**

Ethiron operates efficiently to avoid the need for a central authority. However, you can verify transactions or smart contracts. Verify transactions in a decentralized way.

- **Safe**

As long as it is fair compared with other networks, the network is safe. Although the security model is cleverly designed, it can avoid loopholes in the transaction network.

- **Smart contract**

It defines as the lines of code that work on the exchange of representative values- property, information, or voting rights. Once it is uploaded on the blockchain, the transactions are not modified. Ethiron makes marketing strategies and creates digital assets in issuances.

- **Dapps**

Dapps are programs and tools based on smart contracts on the Ethereum network. It has potential use cases in other areas of supply chain management, asset management, and financial services.

- **Solidity**

It is one of the prime languages of Ethereum. It writes smart contracts, Dapps, and IoT devices based on ethereum technology.

Ethiron P2P

How does Ethiron p2p Works?

Ethiron P2P is a next-generation system that has ease the process of crypto transactions. Users find Ethiron the best interface for frequent trading needs. Furthermore, it designs in a way to matches order completion requirements in a short time.

- Auto-match with seller
- It directly pays to the seller's bank account
- Both buyers and sellers make transactions respectively.

Ethiron Is Based On what? And Its D-apps

Ethiron token is based on the Ethereum ecosystem as we tell you before. Most important, it's a safe and secure cryptocurrency to make investments and savings.

D-apps for ETHIRON

Every DApp has its uniqueness to assure the best experience for all users. DApps (Decentralized Applications) has been optimized and used as a part of the marketplace. The list of DApps is growing but two's of the most trusted DApps are- Metamask or Trustwallet.

Metamask

Metamask equips with a secure token wallet and exchange. It has everything you want to manage the digital assets. Metamask delivers a fast integrated platform to connect to blockchain-based applications. In the new era of decentralization, you can get 24/7 control.

Trustwallet

This is a secure and most trusted crypto-wallet. It can be used to interact with any kind of decentralized application. Besides, this tool offers a seamless experience between the user and decentralized applications. It has an integrated interface that is mobile-optimized, so you can enjoy crypto-trading in a few clicks. Get easy access to cryptocurrencies and more-

- Buy ETHIRON in a few minutes.
- You are one click away to exchange crypto.
- Price and chart tracking under one roof.
- Keep crypto safe from hackers.

Use Of Ethiron

It is worth mentioning that over time, cryptocurrencies have become more and more popular. So it replaced tangible cash somewhere or became a new acceptance all over the world. Most importantly, Ethiron is used in different ways, such as investment, exchange, or payment.

Investment

Cryptocurrencies, especially, Ethiron is one of the worthwhile investment options. The value appreciation of a token is dynamic or unbeatable. However, individuals take it as an investment option.

Exchange

Ethiron tokens are used for transactions with other cryptocurrencies. Soon, it will become the largest holder token in the crypto world. Therefore, it is used as an exchange to buy anything in a short period.

As a mode of transaction

Conceptually, Ethiron as a transaction method has greater value for all merchants. Therefore, many merchants accept Ethiron such as jewelers, restaurants, and international flights. It will be accepted as a viable payment method.
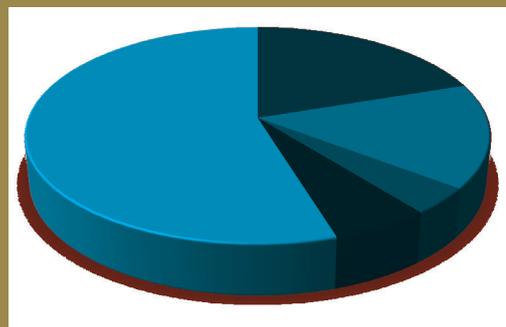

Token Allocation

The primary piece of information related to ethiron token sale is available in this document. While our token sale marketing efforts, the information contained in this document. This document does not mention any kind of information for investment. There are no rules and regulations of any product designated to save investors. Therefore, it is not an offer to buy the form of security.

The document has forward-looking information including events or results related to ethiron trading. The token is available to all residents and citizens.

Supply Of Ethiron

Here's what is the actual supply of Ethiron-

- **Direct Income** - 20%
- **Level Income** - 15.75%
- **Reward** - 6%
- **Promotion** - 4%
- **Trading** - 54.25%

ETHIRON

ROAD MAP

2020
Analysis of design and project execution.

2020
A search for creating a crypto token named ETH- IRON.

Q1 2021
Team building and take necessary steps in the development of the ETH- IRON.

2021
The Beta version of the platform is launched.

2021
The Final version of the eth iron token is built in.

Q1 2021
We had a meeting with many professional investors to create the best crypto token.

Q2 2021
The public transaction starts.

Q3 2021
Finally, the white paper is done.

Q4 2021
Exchange listing of ETHIRON token.

2022
New projects are coming.

ETHIRON

Ethiron delivered on its promise to build a new decentralized crypto world. Therefore, we will take you to the era of tokenization. The Ethiron team can help you invest in virtual tokens. We provide reliable tokens to fill your pockets with money.
